

DigiRadio *OnAir*

DigiRadio OnAir is a system composed of software and hardware for Radio Broadcasters, with the function of automating the operations of digitization and placement of audio material with features of creation of schedules, management, effects, commands for automation and reporting of delivery.

The most complete Automation System for Radio Stations

- Virtual Console with features of a physical audio desk
- Microphone and Line Input Channels
- 04 output channels with 10 audio mixers
- Audio Compressors for the 04 Channels
- FadeIn and FadeOut Time and Curve Controls
- Reception of Web Radios incorporated into the system
- Playlist and DigiPlay Modules
- Local Temperature and Time
- Operation with 02 Monitors
- Network Operation with up to 09 Servers
- Streaming with command generation in real time
- Total redundancy of the fiscated local sound table
- Operation with PCIe and USB audio cards
- Multilingual: - Portuguese-English - Spanish

Rental plan with updates, support and no initial investment

DigiPlay -Module for operation of fast and efficient inserts of commercial, institutional, vignettes, etc, with infinite lists operation feature programmed according to the needs. Fadel n, FadeOut, and Mixing features.

DigiRec - With the function of recording audio from an external audio source, this module has several scan format options for audio files, Auto Start, Mixing, Fade In and Fade Out. The spot is automatically registered to the database system and available for play

CdPlayer - Module that allows playback of audio CDs directly in the mixer and channel to which it was selected. CDPlayer also has an Internet connection to search the song information (CDBB) recorded on the CD.

Cue Module - Through the Cue module it is possible to obtain a pre-playback of the spot on the channel programmed for Cue, quick search in the file. The Channel and audio card to be used by the Cue is configurable.

With the DigiCD module you can automatically scan the tracks of a Compact Disc and automatically register it in the Digiradio OnAir database. Through a simple and automatic process, the contents of the CD are quickly available for playback. The DigiCD also has an internet connection to search the information of songs (CDBB) and add them to the system registry.

ProgList - Module the function of assisting the creation and editing of the programming files. Through the complete display of the registered spots database and the drag and drop function it is possible to create new programming, add, delete spots and change their positions and edit schedules already done locally or via network with the software installed in another computer.

DigiStream - Streaming Internet module to stream the DigiRadio OnAir output channel or master radio station console to the web through it's own interna server or an external provider server. Resouce to send audio with realtime commands to any other DigiRadio OnAir connected to the web and use thes comandas to start, stop, pause local Plyplaylist's, DigiPlay, others modules remotely. Commands may be embedde on the Digiradio OnAir server oe can be manually actuated throuh 16 pre-programmed commanda pushbuttons.

A great solution for a networked radio station or for single streaming your broadcasting radio
